

NOVABRIDGE TECHNOLOGIES INVESTOR DECK

UPDATE EXTRACTS May 2026

SLIDE 4 - PRODUCT EVOLUTION

NovaBridge now combines graph-backed diligence reasoning, evidence lineage, and AI-assisted contradiction detection inside a collaborative deal workspace. New “Position Snapshot” architecture allows investment teams to track evolving conviction over time while maintaining historical evidence integrity.

SLIDE 8 - TRACTION & VALIDATION

1 paid deployment converted from pilot (Greenfield Capital). 2 active pilots with upper mid-market PE firms. Pipeline exceeds £540K in qualified opportunities. Advisory network expanded with former Blackstone operating advisor and ex-DealCloud product executive. Average weekly usage during pilot periods increased 3.4x over the prior quarter.

SLIDE 9 - PLATFORM METRICS

Early customer pilots report: • 41% reduction in time spent reviewing duplicated diligence evidence. • 32% faster memo preparation. • Improved contradiction visibility across management interviews, data rooms, and expert calls.

SLIDE 11 - BUSINESS MODEL UPDATE

Pricing expanded into three deployment tiers: Foundation: £65K/year Enterprise: £120K/year Private Cloud: £220K+/year Additional monetisation introduced through API ingestion credits and portfolio monitoring modules. Target ARR revised to £2.4M by end of Year 2.

SLIDE 13 - TECHNOLOGY DIFFERENTIATION

Unlike generic AI copilots, NovaBridge structures diligence outputs into an evolving knowledge graph with deterministic schema enforcement. The platform can surface conflicting positions, incomplete evidence chains, and unsupported assumptions before IC memo submission. Management believes this becomes increasingly valuable as AI-generated diligence content volume increases across the industry.
